

WINKGEM

INTRODUCTION

The concept of this project is revolutionizing the crypto world since crypto currencies are globally accepted with our online users to buy goods and services that use an online ledger with strong cryptography to secure online transactions. Winkgem is a profitable equity marketplace founded by Hiroto Itsuki and backed by Vitalik Buterin's Ethereum Blockchain Network. Its mission is to give its clients quick, secure, and anonymous exchanges using the blockchain technology. It also aims to unlock the global market economy for billions of possibilities with virtual currencies and items. It is created with mineable calculations. The arranged

execution of Masternodes, Proof of Stake, Smart Contracts, and Quantum obstruction conventions all through our guide will get Winkgem's place as the quintessential currency of future.

WHY DECENTRALIZED

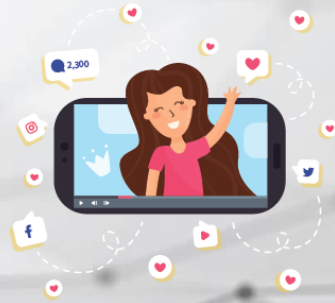

WINKGEM is a decentralized marketplace that turns every digital asset and item into a real commodity. Since the blockchain's inception, blockchain technology has seen outstanding development and application across an array of ventures, however, the blockchain still faces numerous basic difficulties that should be tended to and overcome before global adoption can be accomplished. Winkgem expects to take care of these issues by making the prime genuinely secure, unknown distributed digital money, immune to hacks and the future danger posed by quantum calculations, while keeping up unmatched transaction times with lesser fees.

PURPOSE & BENEFITS

To be used in Marketplaces, Games at Exchanges

Dedicated for celebrities, influencers and online sellers

To be used in Social Media Platforms

Serve as payment portal and payment option for online purchases and transactions

Cryptoholders at Winkgem can benefit from being exposed to the price of various real assets, equity, commitment, gold, real estates, commodities and even artworks. The value of these holdings total to multi-trillion and cryptoholders is able to buy tokens linked to their price in WINKGEM platform with low transaction costs and maximum lucidity and security.

COMPETITIVE ADVANTAGES

Winkgem platform is fully operational allowing tokens to be created, sold then traded to various trading exchanges.

Its infrastructure includes Winkgem Wallet, Winkgem marketplace, trading terminal and more importantly, the backoffice.

Winkgem Wallet – allows users to control token account balances, do transactions, own new tokens and link them to assets.

Winkgem Marketplace – allows users to offer asset token for initial sale and manage persona information.

COMPETITIVE ADVANTAGES

A Winkgem token owner can create and sell their asset token in the Marketplace proving the essential token information, ask price and settlement date.

As soon as the ICO phase is completed, Winkgem tokens become available for purchase by all registered and trusted crypto exchangers.

Blockchain builds trust, security, transparency, and the discernibility of information shared across a business organization – and conveys cost investment funds with new efficiencies.
